| Selection Process:        | <p>Round 1:<br/>Backend-focused discussion covering past projects and internships. The panel reviews the candidate's skill set in areas like Docker, Kafka, and relevant hands-on work. Proficiency in Python and Java is also evaluated. A few situational and scenario-based questions are included.</p> <p>Round 2:<br/>This round is dedicated entirely to DSA (Data Structures and Algorithms).</p> <p>Round 3<br/>largely resume-driven interview, with in-depth questions on the candidate's experience, along with a few backend-related technical questions</p> |
